### Introduction of connected monitor

#### VM-5 Series Monitor

The VM-5 series Monitors are designed in a accordance with the API 670 4th Edition for use on rotating machinery. Both 8 or 10-slot rack mount type an one-unit standalone type with a built-in power supply are available so the monitor can be applied for any system design from a few channels of vibration monitoring for small machinery to TSI for large turbines.

■High reliability by the use of duplex power supply ■Easy monitoring by the perfect display

function.

Provided with the self diagnostic

Contact to

#### VM-7 Series Monitor

The VM-7 series monitor is designed according to the ISO International Standards and the API Standards, and has the functions and features as the Machine Condition Monitor for the critical machines in the plant, and is used for the Machine Protection System defined in the API standard 670 in particular.

■4CH Vibration/Displacement Monitor Module & 6-CH Temperature Monitor Module

■Up to 40 Vibration channels can be installed in a 19"-Rack
■All modules can be installed and removed from front side, and hot

#### VM-16 Series Monitor

The VM-16 is a 4, 8 or 12-channel machine condition monitor to measure vibration, axial position and temperature, and the monitoring parameters can be assigned to any channel. The color LCD display indicates all information, and it is also a touch panel that allows to setup configuration.

■Trend data memory function:
CompactFlash<sup>™</sup> Memory card and USB
port
■Displacement, Velocity, Acceleration,

Axial position and Temperature

Hazardous area approvals: CSA
(pending)

#### VM-21 Series Conditioner

The VM-21 series signal conditioners accept the signal from transducers installed on rotating machinery and convert it to a 4 to 20 mADC or 1 to 5 VDC output.

■ Displacement, velocity, acceleration and LVDT

■ Small and light-weight
■ Free choice between DIN rail or wall
mounting in any convenient location
■ Burn-down function at the output side
for quick fault detection

■Equipped with vibration waveform output for high precision diagnosis

We have the vibration analysis/diagnostics and the remote monitoring systems other than above mentioned monitors. Please contact us for farther information.

# FK-202F Non-contact Displacement / Vibration TRANSDUCER

- Suitable for various applications: Shaft Vibration, Axial Position, Rotating Speed and Phase Mark of the critical rotating machinery.
- Environmental friendly design: Lead-free soldering, RoHS Directive Compliant and Downsized.
- Wide variety of Driver mounting: DIN-rail adaptor, 4-screw-cramp plate adaptor (to replace VK series and others)
- API standard 670 (4th Edition) Compliant
- Intrinsically Safe: TIIS, CSA, ATEX, NEPSI, KTL
- CE Directive Compliant

Printed in Japan 10601E1.1-07201 © 2006-2007 SHINKAWA Sensor Technology, Inc. All rights reserved.

# **FK-202F** Non-contact Displacement/Vibration Transducer

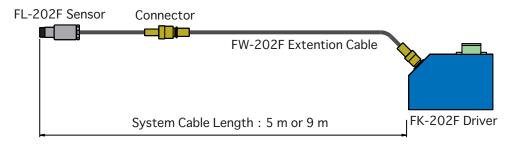

The FK-202F transducer is the eddy current type non-contact displacement/vibration transducer, used for measuring Shaft Vibration, Axial Position, Rotating Speed and Phase Mark (Phase Reference) from small rotating machinery to large critical machinery such as turbines and compressors in plants.

Designed with due considerations for environments, the FK-202F has achieved lead-free soldering, RoHS Directive<sup>11</sup> compliance, also downsizing the driver<sup>2</sup>.

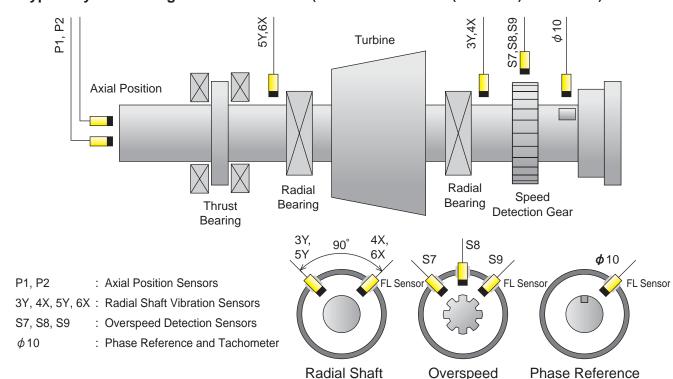

In addition, the FK-202F is designed to meet the API (American Petroleum Institute) standard 670 (4th Edition) requirements, often referred by the Machinery Protection Systems for the petroleum refinery and the petrochemical plant in world wide.

# Specifications

Specifications	
Standard Calibration Target	JIS SCM440 flat surface
Measurement Range	0.25 to 2.25 mm from sensor tip
Scale Factor	7.87 V/mm
Scale Factor Tolerance*1	Within 7.87 V/mm $\pm 5\%$ (When system cable length is 5 m.) Within 7.87 V/mm $\pm 6.5\%$ (When system cable length is 9 m.)
Linear Characteristics*1	Within $\pm 25~\mu m$ for a straight line of 7.87 V/mm (When system cable length is 5 m.) Within $\pm 38~\mu m$ for a straight line of 7.87 V/mm (When system cable length is 9m.)
Frequency Response*1	DC to 10 kHz (-3 dB)
Sensor Tip Diameter	Approx. $\phi$ 5 mm or Approx. $\phi$ 8 mm
System Cable Length	5 m or 9 m
Operational Temperature Range	FL sensor : $-35$ to $+177^{\circ}$ C FW extension cable : $-35$ to $+177^{\circ}$ C FK driver : $-35$ to $+80^{\circ}$ C Relay connector : $-35$ to $+125^{\circ}$ C
Operational Humidity Range	30 to 95% RH (No condensation, submerge) (However, the sensor itself is 100%RH)
Power	Within −24 VDC±10%
Terminal Block	Spring lock terminal

Specifications of \*1 above apply under the following conditions:

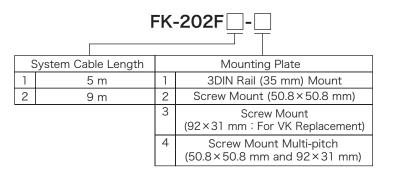

- Standard calibration target SCM440 flat surface ( $\phi$  15 mm or more, t=5 mm or more)
- −24.0 VDC Power source voltage
- Load resistance 10 kΩ
- · Ambient temperature 25°C
